

Fundo de Sustentabilidade Hydro

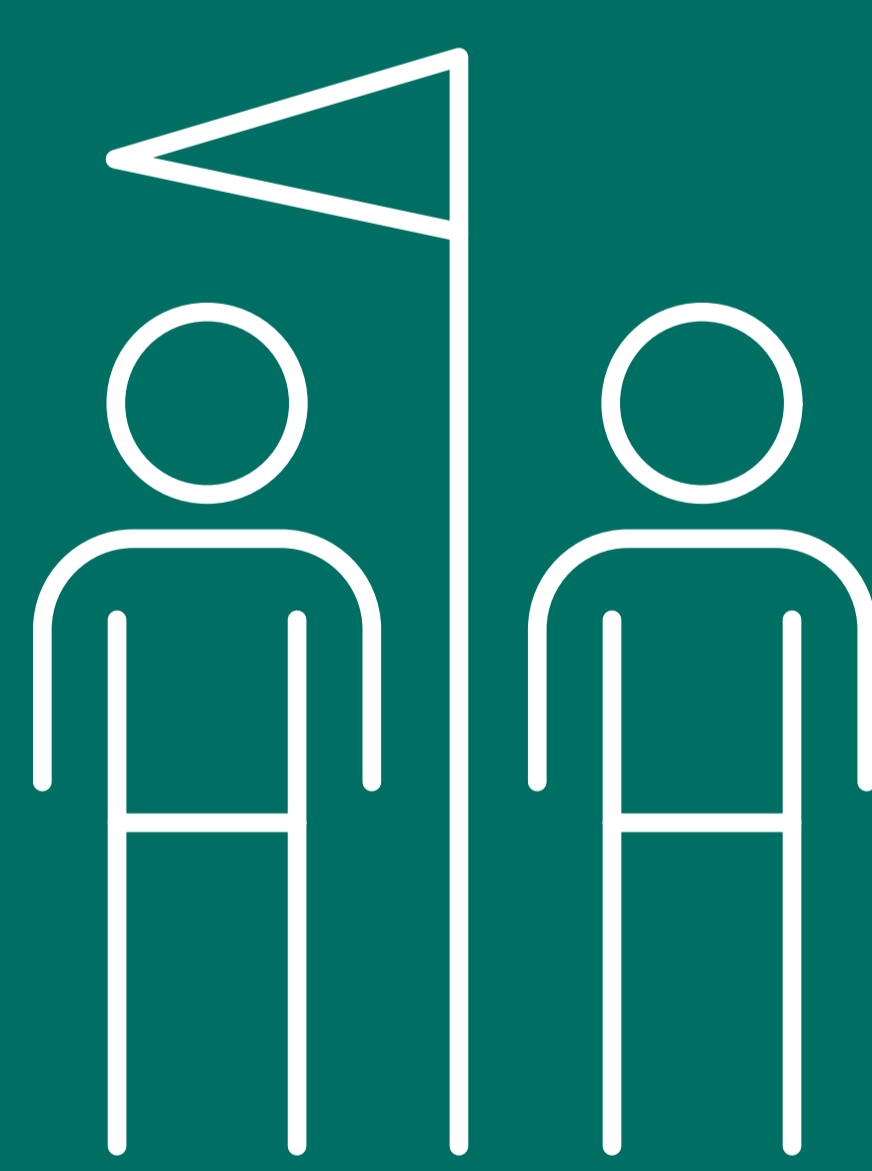

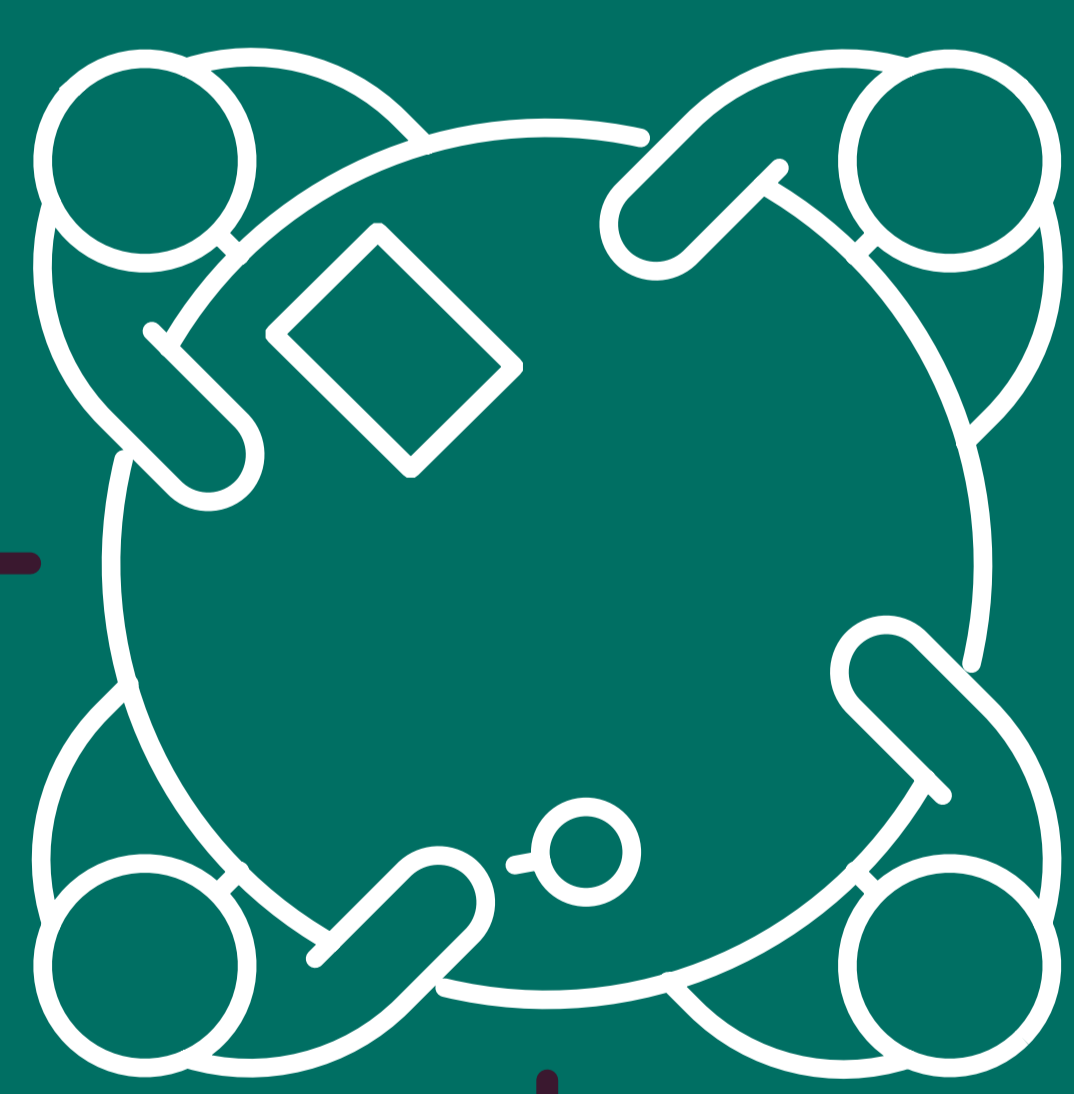

The *Fundo de Sustentabilidade Hydro* (FSH) was created in 2019, when companies Hydro and Albras joined forces to build a better and more sustainable future in the areas where they operate.

The starting point was in the municipality of Barcarena. In 2024, the FSH brings news by expanding its investment to actions and projects that promote the sustainable development of the mining pipeline area, which includes the cities of Paragominas, Ipixuna do Pará, Tomé-Açu, Acará, Moju, Abaetetuba and Barcarena. FSH advances in its trajectory fostering a relationship of partnership and respect with people, institutions, and public authorities, believing that teamwork, active listening and transparency enable society's structuring and positive transformations.

Over ten years, we will invest up to BRL 100 million to enhance projects carried out by and for the community, based on the main demands of the territories. For us, development must benefit everyone.

In 2023, FSH benefited hundreds of people by supporting the following initiatives and projects:

- Iniciativa Barcarena Sustentável.
- Observatório do Desenvolvimento Sustentável de Barcarena.
- Plataforma Conexões Sustentáveis – 22 projects.
- Estilo Barcarena.
- Trilhas de Capacitação de Formação Social.
- Memórias de Barcarena.
- Tipítix.
- Itinerários Amazônicos.
